AND INSPECTION REQUIREMENTS

CNS
customized NDT solutions

Safety for you and your customers • That is our ambitious goal

Recalls, cost cutting and changing commodity markets require efficient and reliable testing systems. The devices of our QUTEC-series ensure your high quality standards as well as your high safety objectives – with minimal effort.

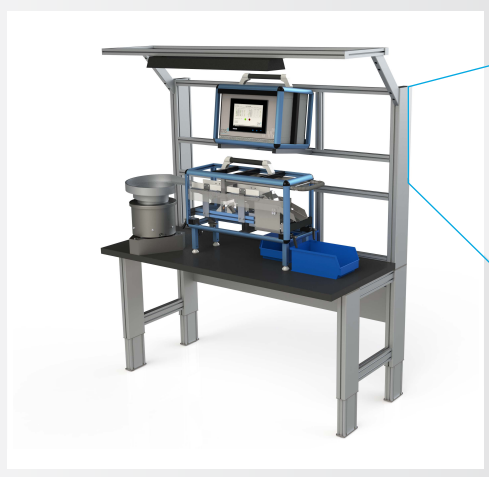

Based on Harmonic Analysis Technology (HAT)

Advantages:

- No destruction of parts
- Reliable testing of coated and sheathed parts
- Setup Wizard for easy handling
- Manual or automatic component feed
- Testing speed up to 1 part per second

sort.HAT • One efficient testing system for a huge range of different ferro-magnetic components. The system can be fed with components of different geometry, shape or colour. Indispensable for the incoming and outgoing inspection of safety related parts. Sorting in good and bad parts by HAT and by visual inspection.

sort.LIGHT • The efficient testing and sorting system to support product launches, process changeovers or to support in the case of product recalls. Very suitable for service providers with changing locations. Easy, mobile, fits in every trunk! The system can be used flexible in production lines or as an external test station.

CNS is your developer, manufacturer and supplier of products and solutions of non-destructive testing (NDT). Our products are used in the aviation and aerospace industry as well as in the automotive, railroad, processing and chemical industry. Our range of services includes the development and manufacturing of customized testing systems, applications, feasibility studies, project management, training, calibration, repair and retrofit of testing systems.
